

Electrical Installation

COMPLETE SHIP INSTALLATIONS BASED ON REAL EXPERIENCE

We deliver complete ship electrical systems from design and engineering to onboard, hands-on installation. Our people's unique knowledge and experience sets us apart as a reliable and trustworthy partner that defines the standard for maritime electrical installation.

All things electrical

Since 1971, Hareid Group has delivered complete electrical installations for over 300 vessels, primarily at yards in Norway. Over the last five decades, ship design and ship building in general, and electrical systems in particular, has taken quantum leaps. Hareid Group has been at the forefront of this development as an innovative yet reliable supplier of design, production installation, testing and commissioning of electrical systems and components. The fact that we not only engineer and manufacture, but also perform the onboard electrical steelwork, cable pulling and termination, means that our technology is based on real, hands-on shipbuilding experience. As we have broadened our portfolio into advanced automation systems, navigation and communication solutions and electrical systems integration, this real-life building experience has always been a central part of our thinking. This allows us to create solutions that work – also when put to the test in the harshest environments at sea.

300+

vessels installed
since 1971

Scope of Delivery

- Engineering & Systems Integration
- Electrical equipment
- NavCom equipment
- Full range of ship cable
- Installation materials
- Cable cutting and labelling
- Cable pulling
- Cable termination
- Megging and testing
- Mounting of electrical components
- Commissioning
